## **Lab-1: Setup Environment**

#### Introduction

This lab will set up the Cloud Pak for Data environment for subsequent labs. Cloud Pak for Data is an integrated platform of tools, services, data, and meta-data to help companies and agencies accelerate their shift to be data driven organizations. The platform enables data professionals such as data scientists, data engineers, business analysts, and application developers collaboratively work with data to build, train, deploy machine learning and deep learning models at scale to infuse AI into business to drive innovation. Cloud Pak for Data is designed to support the development and deployment of data and analytics assets for the enterprise.

### **Objectives**

The goal of this lab is to create a Cloud Pak for Data project. Projects are a core component of Cloud Pak for Data. Projects enable you to organize your analytic and data assets in one place. Projects are also the home base for collaboration. Colleagues can be added as collaborators on a project with administrator, editor, or viewer access.

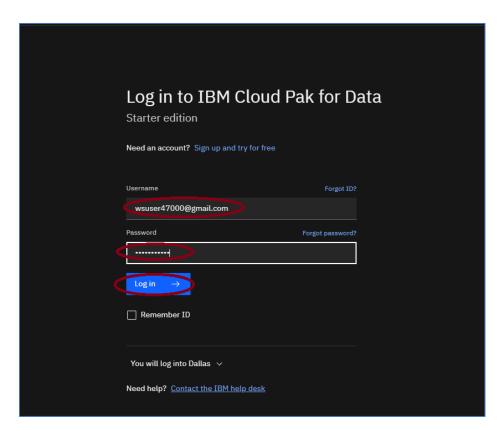

After completing this lab, you will be familiar with these features of Cloud Pak for Data.

- 1. Create a project
- 2. Associate a Machine Learning service with the project.
- 3. Initiate Watson OpenScale Auto setup.

This lab requires that you have a Cloud Pak for Data account. Please follow the signup instructions if you do not have an account.

### **Create a Project**

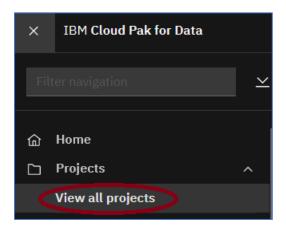

- 1. Log into your Cloud Pak for Data account by typing in the url **dataplatform.cloud. ibm.com** in your Firefox or Chrome browser.
- 2. Enter the Username, Password and click Log in.

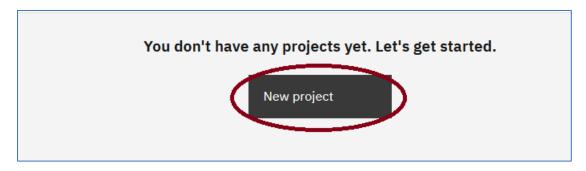

3. Click on the hamburger icon **=**.

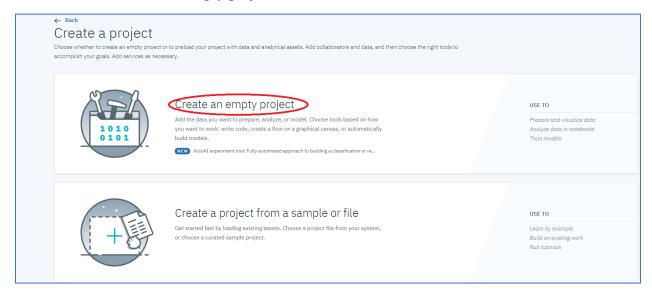

4. Click on View All Projects

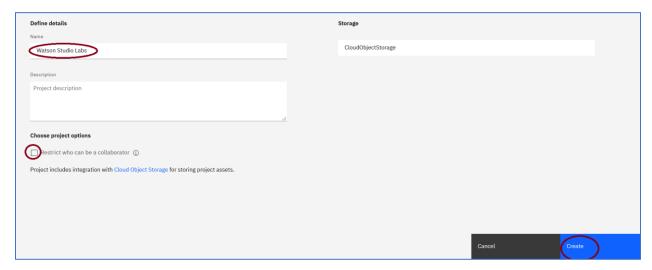

5. Click on **New Project**.

6. Click on Create an empty project.

7. Enter "Watson Studio Labs" for the Name, optionally enter a **Description**, make sure to uncheck **Restrict who can be a collaborator** (if it's checked), and click **Create**.

**8.** The Project **Overview** page is shown. This page provides summarized information about the project. In addition to the Overview page, are five other pages described below.

- **a. Assets Page** Analytics and Data assets can be added to the project from this page.
- **b. Environments Page -** Provides information on the current notebook environments that are defined, lists the active notebook environments currently running, and enables users to create custom notebook environments.
- **c. Jobs Page** Provides the interface to the job subsystem.
- **d. Access Control** Lists the project collaborators and enables users to add/remove collaborators.
- e. Settings Enables users to view and set project attributes.

### Associate a Watson Machine Learning Service to the Project

To save and deploy machine learning models, a Watson Machine Learning service must be created (if one doesn't exist) and added to our project.

1. Click on **Settings** to navigate to the Project **Settings** page.

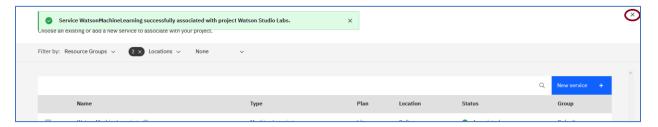

2. Scroll down to Associated Services, click on Add service, click on Watson.

3. Newer Watson Studio accounts come with the WatsonMachineLearning instance already created. Click on the checkbox adjacent to the WatsonMachineLearning (Type-Machine Learning) service and click **Associate service**. Note, if a service of Type **Machine Learning** does not exist, go to step 6.

4. Click on **x** to close the window.

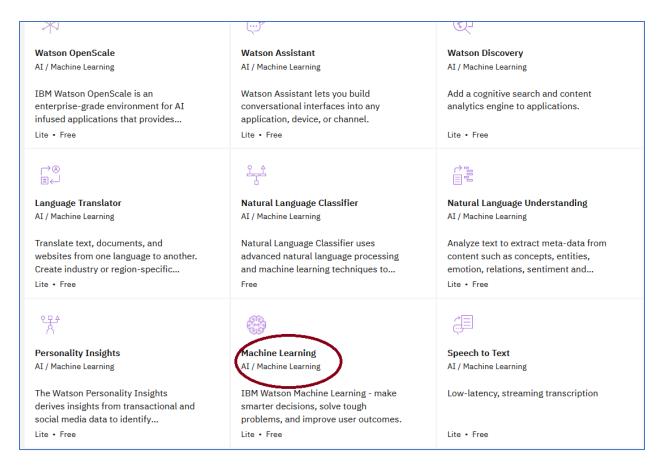

5. The **WatsonMachineLearning** service is associated with the project. Skip to the next section - **Error! Reference source not found.** 

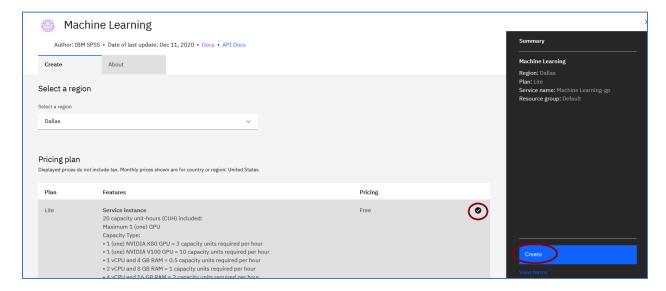

6. If a service of type Machine Learning does not exist, you will need to create the service. Click on **New service**.

7. Click on **Machine Learning**.

8. Make sure the Lite service is selected and click **Create**.

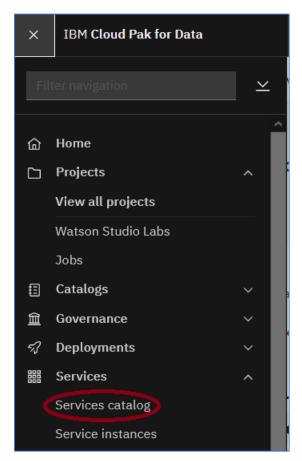

# **Provision Watson OpenScale**

In this section, we will provision a Watson OpenScale service for use in a later lab.

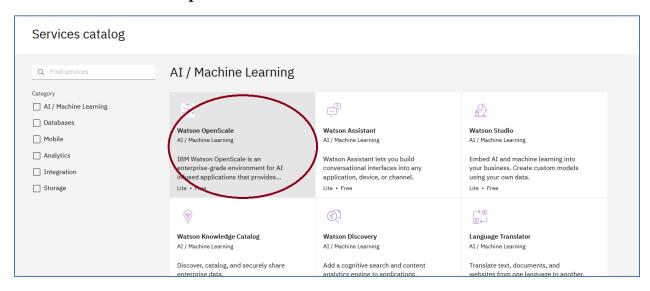

1. Click on the **≡** icon.

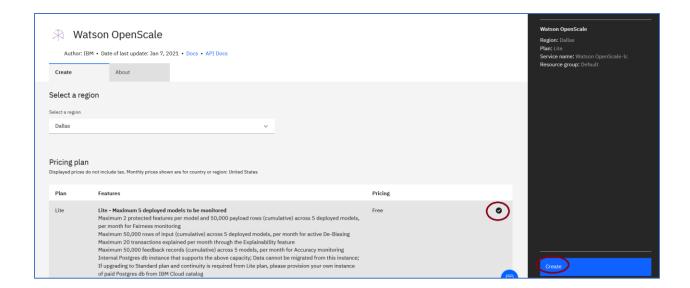

2. Click on **Services** and then **Service Catalog**.

3. Click on Watson OpenScale

4. Make sure the Lite plan is selected and click **Create**.

# You have completed Lab-1!

- ✓ Created a project
- ✓ Associated an existing Watson Machine Learning service instance with the project
- ✓ Created an instance of Watson OpenScale
